Research

The interactions of MDS scatter-plot has been accomplished including hovering and color mapping. Today I will focus on refactoring the backend in order to support more dataset and settings. After some more dataset implementation I consider whether it is time to write a report to Prof.Tung. Figure 1 shows the overview of current interface.

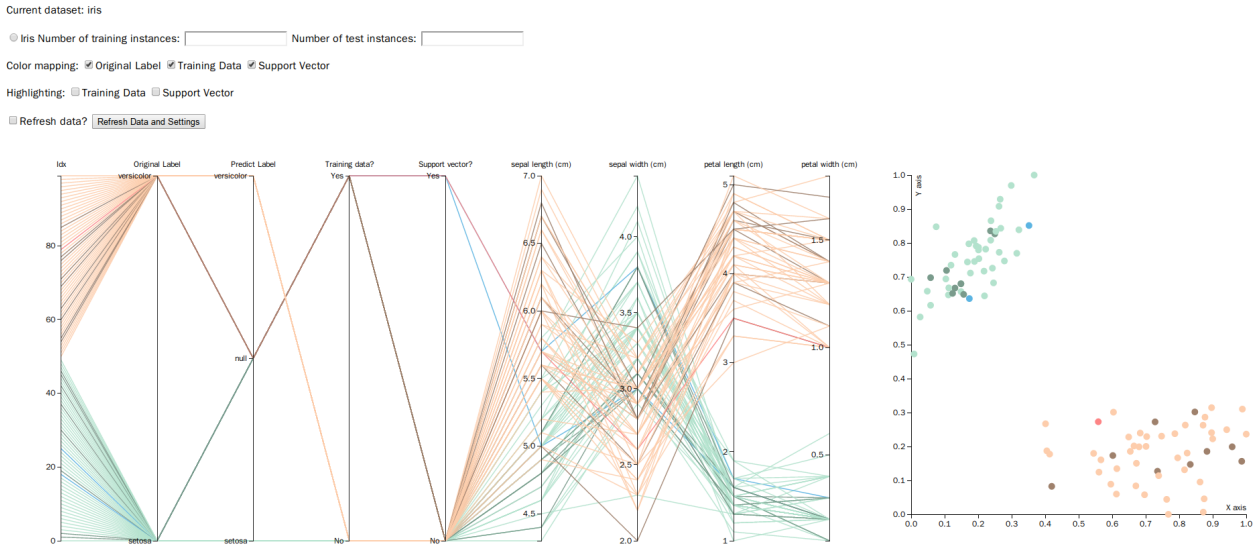

Figure 1: Overview of current interface.

The next thing I need to take into consideration is to do a survey on how to tune an SVM and choose a kernel to fit the real dataset.
